

Composite Solutions Thermal Boost

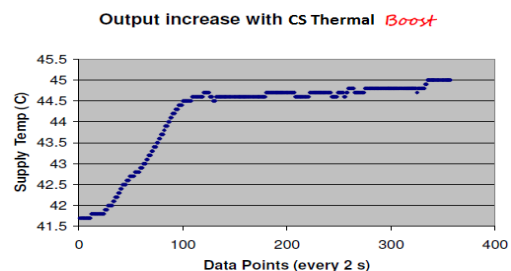

We make heat pumps work better!

Our first generation low rise thermal boost is designed to improve the performance of air source heat pumps at temperatures below -10°C . This is accomplished by preheating the ambient air back to the temperature where your heat pump works more efficiently.

Benefits of Ctherm Boost:

- Higher heating performance at colder temperatures (as much as 30% increase)
- Reduced outdoor coil ice-up
- Shorter defrost times
- Increased cooling performance
- Longer life of heat pump
